3.	CONNECT BIGCOMMERCE STORE TO IFTHENPAY	4
4.	INSTALLATION.....	5
5.	CONFIGURATION.....	6

1. INTRODUCTION

Ifthenpay's app for Bigcommerce CMS allows merchants to integrate Multibanco, Mbway, Payshop, Credit Card and Cofidis Pay without any further implementations on your store.

It manages the transfer of the customer from the merchant's ecommerce store to the secure Ifthenpay payment gateway, and back again.

2. CREATE DRAFT APP

Follow the following steps to install a draft app:

1. Sign in to the Developer Portal.
2. Click Create an App.
3. Name the new app as Ifthenpay.
4. Enter app's callback URLs:
 - **Auth:** <https://services.ifthenpay.com/bigcommerce/auth/install>
 - **Load:** <https://services.ifthenpay.com/bigcommerce/auth/load>
 - **Uninstall:** <https://services.ifthenpay.com/bigcommerce/auth/uninstall>
5. The app will need full permission for all Auth scopes
6. Click Update & Close.
7. Click View Client ID to view the app's **client_id** and **client_secret**.

3. CONNECT BIGCOMMERCE STORE TO IFTHENPAY

To connect a BigCommerce store to a Ifthenpay account, the merchant must have already created a draft app at BigCommerce Partner Account, as demonstrated in the previous step:

1. Log in to the Ifthenpay backoffice.
2. In the "Administration" section, select the "Integrations" option.
3. Click on the "New Credential" button and select the "BigCommerce" platform.
4. Press the gear icon (⚙️) on the new generated record, which will open the BigCommerce integration form.
5. Fill in store details including store URL, BigCommerce Client ID and Client Secret.

4. INSTALLATION

Follow the following steps to install the Ifthenpay app:

1. Sign in to the store and navigate to Apps > My Apps > My Draft.
2. Click the draft app thumbnail to install the draft.
3. Once you click Install, BigCommerce will begin the OAuth flow by making a GET request to the app's /auth callback URL.

5. CONFIGURATION

After installing the application, the merchant will need to onboard Ifthenpay to proceed. By subscribing to Ifthenpay services, the merchant will receive a backoffice key that will be used to authenticate in the Ifthenpay backoffice, as well as in the BigCommerce app.

The screenshot displays the Ifthenpay configuration interface. It features a dark blue header with the 'ifthenpay' logo and a navigation arrow. The main content area is divided into two panels. The left panel, titled 'Set your Payment Gateway', contains a dropdown menu labeled 'Choose a gateway key', two input fields for 'Description' and 'Expiry Days', and two buttons: 'Save' (blue) and 'Back' (dark grey). The right panel, titled 'Select your account key', lists four options: '+ Multibanco' with a blue MB logo, '+ Mbway' with a red MB logo, '+ Payshop' with a red payshop logo, and '+ Ccard' with a blue and red VISA/Mastercard logo.

1. Enter the backoffice key to configure the app.
2. After it, the merchant will be able to configure their Ifthenpay payment gateway, being able to select a gateway key, as well as define a description and payment expiry days for it.
3. The merchant may have a variety of gateway keys, if requested. Each gateway key will have different payment methods associated with it. And each payment method has different account keys for the merchant to configure. When making the desired selections, the merchant will be able to save or even reset their settings.
4. When the merchant successfully saves their ifthenpay payment gateway settings, a merchant store checkout script will be automatically generated, allowing the store's customers to make payments with Ifthenpay at the merchant store.
5. If the merchant wishes to remove the Ifthenpay payment option, they do not need to uninstall the application. Just click the reset button on the app.
