- 3. CONFIGURATION..... 4

1. INTRODUCTION

Ifthenpay's app for Bigcommerce CMS allows merchants to integrate Multibanco, Mbway, Payshop, Credit Card and Cofidis Pay without any further implementations on your store.

It manages the transfer of the customer from the merchant's ecommerce store to the secure Ifthenpay payment gateway, and back again.

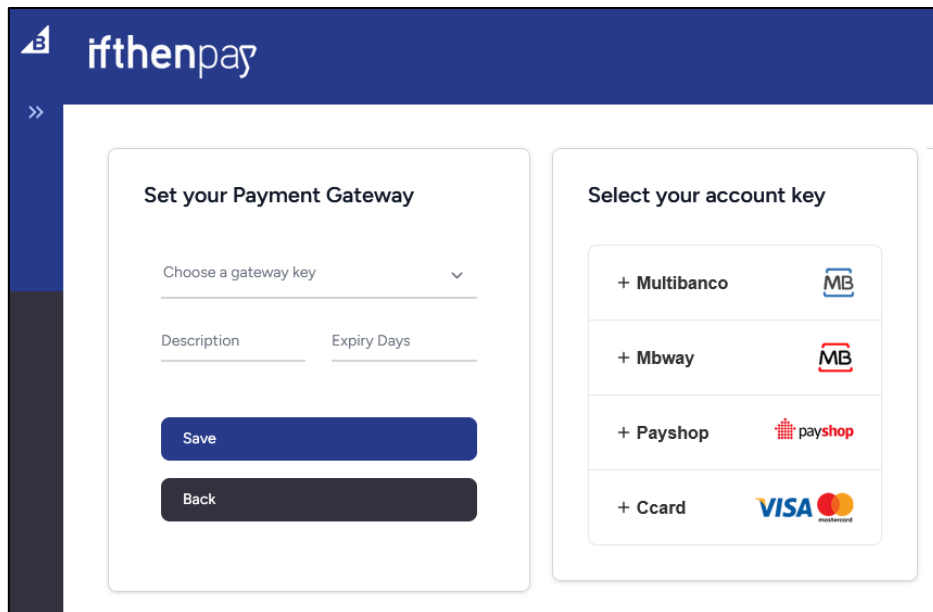

2. INSTALLATION

Follow the following steps to install the Ifthenpay app.

1. Log in to the BigCommerce admin panel.
2. On the left menu, click on Apps.
3. On the new page, click on Marketplace.
4. On BigCommerce Marketplace, search for Ifthenpay, click on “Get this app” button and after it press on install button.

3. CONFIGURATION

After installing the application, the merchant will need to onboard Ifthenpay to proceed. By subscribing to Ifthenpay services, the merchant will receive a backoffice key that will be used to authenticate in the Ifthenpay backoffice, as well as in the BigCommerce app.

The screenshot displays the Ifthenpay configuration interface. It features a dark blue header with the 'ifthenpay' logo and a navigation arrow. The main content area is divided into two panels. The left panel, titled 'Set your Payment Gateway', contains a dropdown menu labeled 'Choose a gateway key', two input fields for 'Description' and 'Expiry Days', and two buttons: 'Save' (blue) and 'Back' (dark grey). The right panel, titled 'Select your account key', lists four options: '+ Multibanco' with an MB logo, '+ Mbway' with an MB logo, '+ Payshop' with a payshop logo, and '+ Ccard' with a VISA Mastercard logo.

1. Enter the backoffice key to configure the app.
2. After it, the merchant will be able to configure their Ifthenpay payment gateway, being able to select a gateway key, as well as define a description and payment expiry days for it.
3. The merchant may have a variety of gateway keys, if requested. Each gateway key will have different payment methods associated with it. And each payment method has different account keys for the merchant to configure. When making the desired selections, the merchant will be able to save or even reset their settings.
4. When the merchant successfully saves their ifthenpay payment gateway settings, a merchant store checkout script will be automatically generated, allowing the store's customers to make payments with Ifthenpay at the merchant store.
5. If the merchant wishes to remove the Ifthenpay payment option, they do not need to uninstall the application. Just click the reset button on the app.
