BIGCOMMERCE

Ifthenpay for BigCommerce:

User Guide

version 1.0

Table of Contents

1. INTRODUCTION

This document provides a step-by-step guide for BigCommerce merchants to integrate the Ifthenpay app by creating a draft app within a BigCommerce partner account.

Ifthenpay's app for Bigcommerce allows merchants to integrate Multibanco, Mbway, Payshop, Credit Card and Cofidis Pay without any further implementations on your store.

It manages the transfer of the customer from the merchant's store to the secure Ifthenpay payment gateway, and back again.

2. CREATE DRAFT APP

Follow the following steps to install a draft app:

1. **Authentication as a BigCommerce partner**: The merchant needs to authenticate as a BigCommerce partner.

2. **Access the developer tools**: Go to BigCommerce Developer Tools.

3. **Create an app**: Create a new app and name it "Ifthenpay".

4. **Define Callback URLs**: Set the following callback URLs:
   o **Auth:** https://services.ifthenpay.com/bigcommerce/auth/install
   o **Load:** https://services.ifthenpay.com/bigcommerce/auth/load
   o **Uninstall:** https://services.ifthenpay.com/bigcommerce/auth/uninstall

5. **Set OAuth scopes**: The merchant should select modify permissions for all scopes.

6. **Save app settings**: Save the app settings after configuration.

7. **Save credentials:** Click View Client ID to visualize app's **client_id** and **client_secret.** Both will be needed for the next step.

3. CONNECT BIGCOMMERCE STORE TO IFTHENPAY

It is worth noting that, at this stage, the customer must already have an account with Ifthenpay and created a draft app at BigCommerce Partner Account, as demonstrated in the previous step. To connect a BigCommerce store to a Ifthenpay account, follow these steps:
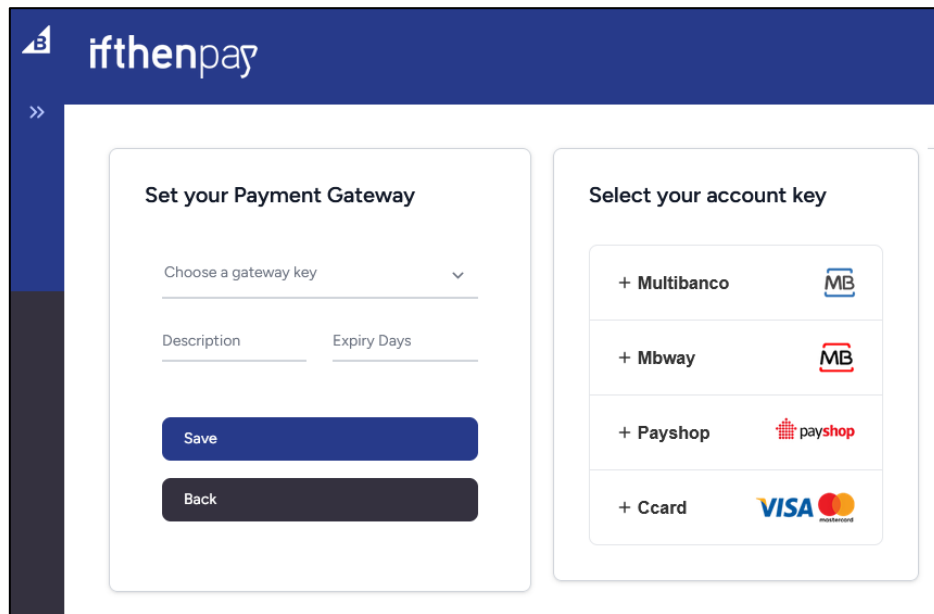

1. Log in to the Ifthenpay backoffice.
2. In the "Administration" section, select the "Integrations" option.
3. Click on the "New Credential" button and select the "BigCommerce" platform.
4. Press the gear icon (⚙) on the new generated record, which will open the BigCommerce integration form.
5. Fill in store details including store URL, BigCommerce Client ID and Client Secret.

4. INSTALLATION

As soon as the previous configuration has been completed successfully, the merchant will be able to properly install the draft application on the store by following the next steps:

1. Sign in to the store and navigate to **Apps** > **My Apps** > **My Draft**.
2. Once you click Install, BigCommerce will begin the OAuth flow by making a request to the app's /auth endpoint.

5. CONFIGURATION

After installing the application, the merchant will be able to configure and integrate Ifthenpay payment gateway on store checkout. The next topics explain the configuration process in detail:

1. Enter Ifthenpay backoffice key to start configuring the app.
2. Now the merchant will be able to select a gateway key, as well as define a description and payment expiry days for it.
3. The merchant may have a variety of gateway keys, if requested. Each gateway key will have different payment methods associated with it. And each payment method has different account keys for the merchant to configure. When making the desired selections, the merchant will be able to save or even reset their settings.
4. When the merchant successfully saves their ifthenpay payment gateway settings, a merchant store checkout script will be automatically generated, allowing the store's customers to make payments with Ifthenpay at the merchant store.
5. If the merchant wishes to remove the Ifthenpay payment option, they do not need to uninstall the application. Just click on reset button in the app.

Following the entire process mentioned above, the merchant will now have the new payment methods, provided by Ifthenpay, available at the checkout of their store.
